QUICK HITS

I Hate boxing

Ford won 1st, 2nd & 3rd. Brian, Remember they brought them in together.

The McLaren-Amon and the Miles-Hulme cars were running within seconds of each other as the race neared its end, with the Bucknum-Hutcherson car hanging back as insurance. A decision was made in the Ford pits to have the cars finish side by side in what hopefully would be considered a dead heat. All three cars went over the finish in formation, but any chance for a dead heat disappeared when officials discovered a rule that in case of a tie, the car that had started further down the grid had travelled the farther distance. Since McLaren and Amon had started 60 feet behind Miles and Hulme, they were declared the winners.

I use supper for dinner. I said dinner for lunch. That from Nebraska. We're both hicks.

Sadly I think executive orders should only be used in emergency situations. Like pandemics.

Gavin should never have partied.

See other hypocrites below

What do you say to the mother whose teen son is the one who died because he had diabetes when he contracted Covid at a party.

This is a world wide pandemic. If cases spike after Thanksgiving I think there will be a state wide lockdown. Hospitals are 85% full in Annapolis. Health care workers are running low.

"Joan" can't do echos?

Why aren't you talking about the Presidential election and Biden being the winner? And all the idiotic recounts that are working in Biden's favor.

Ring is like having cameras everywhere kind of like iPhones.

Privacy is gone. Can we take it back?

A RINO'S TRUE COLORS

SIMPLY SHOCKING: Republican-Led US Senate's First Major Legislation After 2020 Election Is to Appease Big Tech

Instead of addressing the problems with Section 230, since the tech companies are obviously editors of content now, and the shocking election fraud that occurred in the 2020 election, the US Senate passed Senator Mike Lee's visa guest worker bill. He has been pushing this for years, to bring in more cheap labor for US companies while stealing good paying tech jobs from US workers.

MORE VIRTUE SIGNALING

Sarah Fuller Named The SEC Special Teams Player Of The Week After Kicking The Ball 30 Yards

NCAA Football: Vanderbilt at Missouri

Vanderbilt kicker Sarah Fuller has received a huge honor from the SEC.

Following her one kick against Missouri to open the second half, the SEC named her the Special Teams Player of the Week along with Florida's Kadarius Toney. (RELATED: David Hookstead Is The True King In The North When It Comes To College Football)

The SEC wrote, "She took the opening kickoff of the second half against the Tigers, as her perfectly-executed kick sailed 30 yards and was downed at the Missouri 35-yard line."

This circus needs to end. It's one thing to talk about how cool it is for Fuller to be the first woman to ever play in a Power Five game, but let's stop with this nonsense.

She kicked the ball 30 yards, Vanderbilt lost 41-0 and she had literally no impact on the game. At some point, we have to wake up and face reality.

At some point, we have to admit that we're honestly insulting female athletes by pretending what Fuller did was spectacular.

There are some unreal female athletes out there, and nobody really talks about them. Yet Fuller kicks a ball 30 yards and she's headed straight to the hall of fame.

The craziest part about this situation is that Fuller addressed the team at halftime and criticized their attitude!

Imagine your kicker, who is being used for nothing more than a PR stunt, getting up and ripping the team. Players should have refused to take the field for Derek Mason, who was fired Sunday, in the second half.

If you don't understand the absurdity of this entire situation, then you're just not living in reality.

HYPOCRITES

According to the Austin American-Statesman, Adler and seven other guests at the wedding traveled on a private jet to Cabo, Mexico the day after the wedding, where the Statesman reports the mayor recorded a video encouraging Austin residents to hunker down at home to prevent a rise in coronavirus cases: “We need to stay home if you can. This is not the time to relax,” he said.

This week, San Francisco Mayor London Breed and California Gov. Gavin Newsom found themselves in hot water after it was revealed they had dinner at the same Michelin-starred Napa restaurant French Laundry within a day of each other, despite state guidelines that strongly discourage gatherings of people from multiple households, according to the San Francisco Chronicle.

Denver Mayor Michael Hancock also apologized on social media Monday for traveling to spend Thanksgiving with family in Mississippi after he told his constituents to stay home.

In September, House Speaker Nancy Pelosi faced nationwide blowback after a trip to a hair salon that should have been closed under California state orders, which Pelosi and a hair stylist involved said was a setup by a business owner angry over coronavirus closings.

I JUST DON'T KNOW

An influencer's OnlyFans account was deleted after she sold a naked childhood video of herself

Gabi DeMartino is seen on the a boat during the filming of a music video for her new song "Champagne Dreams" on August 05, 2020 in Cape May, New Jersey.

Gabi DeMartino, an influencer with more than 3 million YouTube subscribers, said she took down her OnlyFans page after outrage erupted over a video she sold containing underage nudity.

The short home video, which DeMartino captioned "wont put my panties on," showed DeMartino as a child lifting her dress to show herself naked. She sold it for \$3.

Critics accused DeMartino of selling unsuspecting fans inappropriate underage sexual content. DeMartino told Insider her OnlyFans wasn't sexual — but some past posts were sexual in nature.

OnlyFans contradicted DeMartino's account and told Insider the page was removed for violating its policies.

HOPE THE BENEFITS ARE GOOD

Iran's top nuclear scientist was assassinated by a remote-controlled machine gun placed in the back of another car, the country's media says

Iran's top nuclear scientist was killed with a remote-controlled machine gun, the country's semiofficial Fars news agency reported.

Mohsen Fakhrizadeh, who was seen as the father of Iran's nuclear program, was killed while driving with his wife and security convoy near Tehran on Friday.

Fars said the gun was mounted on the back of a Nissan truck that self-destructed after a three-minute attack. Iran has blamed Israel.

Ali Shamkhani, Iran's top national security official, on Monday said the hit was "conducted using electronic equipment and there was nobody on the scene," suggesting the weapon was remote-controlled.

THE BATTLE FOR INSECT SUPREMACY

Invasive keyhole wasp builds nests in aircraft instruments, may pose 'significant risk' to air safety

The study, due to be published in the journal PLOS One today, came off the back of a series of incidents at Brisbane airport where wasp nests, constructed in an aircraft's speedometer, forced planes to abandon take-off or even turn back after departure.

A few types of nesting wasps live in the Brisbane area, but no-one knew which was responsible for cutting flights short.

The culprit — a small black wasp with yellow bands on its pointed abdomen nicknamed the keyhole wasp (*Pachodynerus nasidens*) — is a recent arrival to our shores.

Native to the Caribbean and South and Central America, it was discovered in Australia during a routine quarantine check at the Port of Brisbane in 2010, and first spotted at Brisbane Airport two years later.

It can nest in plants and in the ground, but it's named for its propensity to take advantage of artificial nooks and crannies — such as keyholes — when it builds nests.

And they can be a massive headache when they get into things like vital aircraft instruments.

The Problem with Honey Bees

They're important for agriculture, but they're not so good for the environment

To many people, honey bees symbolize prosperity, sustainability and environmentalism. But as a honey bee researcher, I have to tell you that only the first item on that list is defensible. Although they are important for agriculture, honey bees also destabilize natural ecosystems by competing with native bees —some of which are species at risk.

The rise in hobby beekeeping, now a trendy activity for hundreds of thousands of Americans, followed strong awareness campaigns to “save the bees.” But as a species, honey bees are least in need of saving. Media attention disproportionately covers them over native pollinators, and murky messaging has led many citizens—myself once included—to believe they are doing a good thing for the environment by putting on a beekeeper's veil. Unfortunately, they are probably doing more harm than good.

“Beekeeping is for people; it's not a conservation practice,” says Sheila Colla, an assistant professor and conservation biologist at Toronto's York University, Canada. “People mistakenly think keeping honey bees, or helping honey bees, is somehow helping the native bees, which are at risk of extinction.”

Colla recently published an analysis of nearly a thousand comments submitted by citizens in response to Ontario's draft Pollinator Health Action Plan—a proposal that involved a plan for stricter neonicotinoid pesticide regulations. Despite intense public interest in bees and pollination and strong

support of tighter pesticide regulations, Colla and her colleagues found that citizens had a surprisingly poor understanding of the diversity of pollinators and their roles in pollination.

“The focus on neonics [a kind of pesticide] and honey bees has taken a ton of resources away from conserving wild pollinators from their most important threats,” Colla says. She is justifiably frustrated at the misappropriated attention on saving honey bees when, from a conservationist’s point of view, native bees are the ones in more dire need of support.

And while honey bee–centric businesses often support initiatives that benefit native bees, such as developing bee-friendly habitat, the financial contributions pale in comparison to what could be achieved if funds were applied to these initiatives directly. “Beekeeping companies and various non-science-based initiatives have financially benefitted from the decline of native pollinators,” Colla explains. “These resources thus were not allocated to the actual issue people are concerned about.”

For some reason, maybe because they are small, honey bees are not generally viewed as the massively distributed livestock animal that they are. There are millions of honey bee colonies in North America, 2.8 million of which are in the U.S. Approximating around 30,000 bees per colony (the size of a pollination unit), that’s roughly a billion honey bees in Canada and the U.S. alone—almost triple the number of people.

High densities of honey bee colonies increase competition between native pollinators for forage, putting even more pressure on the wild species that are already in decline. Honey bees are extreme generalist foragers and monopolize floral resources, thus leading to exploitative competition—that is, where one species uses up a resource, not leaving enough to go around.

But determining honey bees' influence on natural ecosystems requires empirical testing. It is possible, for example, that alternate foraging habits of native bees—differences in their active times of day or preferred plants, for example—could lead to little effective competition. Honey bees are so ubiquitous, though, that it has been hard to test exactly how their introduction, and subsequent resource monopolization, affects ecosystem networks.

Not so for the Canary Islands. Alfredo Valido and Pedro Jordano, researchers from the Spanish National Research Council in Tenerife and Sevilla, respectively, saw an opportunity to use these islands—a Spanish archipelago off the northwestern coast of Africa—to study how the introduction of honey bees affects the native pollinating community.

In the highlands of the islands’ Teide National Park, thousands of honey bee colonies are introduced seasonally for honey production and removed again at the end of the nectar flow, creating an excellent scenario for experimentation. Their results, published in *Scientific Reports*, do not make honey bees look like the sustainability celebrities they have become.

THIS WEEK IN SKULDUGGERY

Florida Man Uses \$4 Million in COVID Relief to Buy Lamborghini

[MIAMI] – A Florida Man was arrested on multiple charges including bank fraud after using part of nearly \$4 in PPP loans to buy a Lamborghini and other high-end luxury items.

29-year old David Hines of Miami was arrested and charged with bank fraud, making false statements to a financial institution an engaging in transactions in unlawful proceeds.

According to a criminal complaint, Hines applied for nearly \$13.5 million in Paycheck Protection Program (PPP) loans for multiple companies. Fraudulent loan applications were also submitted for the companies payroll expenses. He was approved for a total of \$3.9 million in loans.

According to prosecutors, Hines bought the Lamborghini withing days of receiving the money. Instead of using the funds for payroll as intended, The Florida Man made multiple purchases at resorts and luxury retailers in Miami. When he was arrested, authorities seized the car and approx. \$3.4 million.

Hines was held over the weekend at the Federal Detention Center and granted a \$100,000 bond. His arraignment is currently scheduled for Oct. 14.

Plane passenger sticks gum in woman's hair because she purposely kept flipping it over seat

A viral TikTok video shows why it might be in your best interest to be considerate of your fellow passengers on a commercial airline.

A video posted by Janelle Elise Flom (@janelleelise) allegedly shows the revenge another plane passenger got on a woman sitting in front of her who kept tossing her hair over the seat and blocking the TV screen.

The video starts with the frustrated passenger firmly matting a wad of gum into the other woman's long hair as it's draped over the TV. She pauses her antics briefly as a flight attendant walks by, but then she picks up some nail clippers and begins carefully snipping off random strands.

After that, a lollipop gets added to the sticky mess, and the whole thing is dunked in a travel mug presumably filled with coffee. Jumps ahead show the woman in front repeatedly continuing to toss her hair back, even as the passenger who sacrificed her gum and her coffee for this revenge keeps throwing the hair back onto the other side of the seat.
